DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,414,733 to Ishikawa et al. (Ishikawa). Ishikawa discloses a color filter comprising red, blue and green colored patterns, wherein colored patterns are formed from colored photosensitive resins comprising a pigment dispersion, a monomer, and an initiator. The initiator for each colored photosensitive resin comprises two initiators; an Initiator 1 (IrgacureTM 907) and an Initiator 2 (4,5,4',5'-tetraphenyl-1,2'-biimidazole). See Tables 2-5 and 10. Note that IrgacureTM 907, specifically 2-methyl-1[4-(methylthio)phenyl]-2-morpholinopropan-1-one, is the preferred photoinitiator having a photoabsorption region on the side of wavelengths shorter than 400 nm of the present invention. Therefore, each of the red, blue and green photosensitive resins of Ishikawa contain a photoinitiator having a photoabsorption region on the side of wavelengths shorter than 400 nm, with each photoinitiator using at least two or more photoinitiators.

Pertinent Prior Art

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

JP 9-166708 discloses a photosensitive coloring composition comprising a photosensitive resin and a pigment, wherein the photosensitive resin comprises at least one multifunctional (meth)acrylate monomer and at least one photopolymerization initiator having a maximum absorption wavelength at 300-400 nm.

U.S. Patent No. 6,495,298 discloses a photopolymerizable resin comprising a resin component (A) and a photopolymerization initiator (B), wherein the photopolymerization initiator (B) comprises a diaminobenzophenone compound (B1), a N-phenylglycine compound (B2), and at least one kind of compound selected from the group consisting of 3,3',4,4'-tetra(alkylperoxycarbonyl)benzophenone (B3), 2-methyl-1-[4-(thiomethyl)phenyl]-2-morpholinophen-1-one (B4), and a 1,3,5-thiazine derivative (B5).

Allowable Subject Matter

3. Claims 3 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
